	Bootstrap	HTML5	MySQL	Bitbucket	Envoyer
	Hivelocity	Generative AI			

PROFESSIONAL EXPERIENCE

July, 2025 - Aug, 2026	Full Stack Developer (Freelance), Live Life Stronger - New York-based - Developed and maintained 20+ e-commerce and service-based web applications using Laravel, Livewire, Tailwind CSS, Alpine.js, JavaScript, and MySQL. - Built customer-facing platforms for wellness products, appointment booking, and service-based businesses supporting 2,000+ users across multiple production systems. - Designed backend logic, database structures, payment workflows, and responsive user interfaces to support business and customer-facing requirements. - Optimized application performance, SEO, and user experience using Chrome DevTools and Lighthouse, identifying and addressing frontend and application performance issues. - Improved deployment workflows by transitioning from manual production updates to repository-driven deployments using Bitbucket, Envoyer, Forge, SiteGround, and Hivelocity. - Reduced deployment overhead and improved release consistency by implementing a more structured and repeatable deployment process.
Feb, 2024 - Jun, 2025	Full Stack Developer, Stealth Solutions and Digital Marketing – Alabang - Developed and maintained 50+ e-commerce, marketing, and lead-generation websites using Yii2, Laravel, PHP, JavaScript, MySQL, AJAX, Bootstrap, Vue.js, and the TALL Stack. - Developed scalable web applications and customer-facing platforms for businesses in the health, wellness, and personal care sectors. - Improved website performance and SEO across multiple projects by identifying optimization opportunities through Chrome DevTools and Lighthouse. - Implemented version control and structured deployment workflows using Bitbucket, improving collaboration and release management. - Helped transition development and production processes from manual deployment practices to structured environment-based workflows, reducing production errors and improving deployment efficiency.

Apr, 2022 - Dec, 2023

Software Engineer, Norima Technologies Inc., Dasmariñas

- Developed and maintained enterprise Policy Administration Systems for insurance-industry clients using Java technologies.
- Modernized legacy monolithic applications by migrating components to a modern architecture using Spring Boot and React.js.
- Developed backend services and automation processes using Java and Python to support business-critical application workflows.
- Worked directly with insurance-sector clients to analyze requirements, implement solutions, and support application enhancements.
- Designed application interfaces and workflows using Figma, improving communication and collaboration between business and technical teams.
- Managed source control, code reviews, and collaborative development workflows using Git.
- Contributed to continuous enhancements of core business applications to improve workflow efficiency, reliability, and maintainability.

Oct, 2021 - Mar, 2022

Freelance Web Developer

- Developed a Medicine Inventory and Messaging System using PHP, MySQL, HTML, Bootstrap and CSS to support inventory management and communication workflows.
- Designed and developed a community information portal for a local barangay featuring announcements, news, inquiries, and public information services.
- Built desktop and utility applications using Java SE, Python, and VB.NET, including calculator and administrative applications.
- Managed complete project lifecycles including requirements gathering, database design, development, testing, and deployment.
